Ref. No. 117/26-11-24

Dated 24-8-23

### Energy Policy

To address the impact of energy consumption on our environment and to promote sustainability and alternate use of energy, we establish this Energy Policy as a guide to optimizing energy use, conserving resources, and adopting renewable energy practices. The college requires all teaching and non-teaching staff, students, guests, and residents to act in accordance with this policy.

#### Policy Objectives

1. To sensitize the the teaching faculty, non teaching staff and the student-teachers about their social responsibilities to preserve various forms of energy.
2. To implement practices and technologies to minimize energy wastage in all institutional operations and activities.
3. To align energy practices with national and international environmental and energy efficiency standards.
4. To ensure the availability of necessary resources to achieve our objectives.

#### Implementation procedure

1. Energy-saving measures are mandatory across the campus. All teaching faculty, non-teaching staff, and students are responsible for switching off lights, fans, and electronic equipment when not in use.
2. Install energy-efficient systems, such as LED lights, energy-efficient fans, and appliances, in all campus facilities to minimize energy consumption.
3. Solar panels will be strategically installed in critical areas, including the ICT room, the Skill India PMKVY sewing machine facility, the Women Technological Park, and Hall 1, to ensure a consistent power supply while utilizing renewable energy.
4. Designate technical staff for the regular maintenance and monitoring of solar panels and associated systems to ensure optimal performance.
5. Conduct periodic energy audits to evaluate energy consumption patterns, identify areas for improvement, and ensure efficient use of energy resources.
6. Teaching faculty, non-teaching staff, and students are encouraged to adopt energy-conscious behaviours, such as minimizing the use of power and preferring natural light whenever possible.
7. Wastage of energy through unnecessary use of equipment, leaving devices on standby, or poor maintenance practices is strictly prohibited on campus.
8. Participate in workshops and campaigns relating to awareness of energy conservation and renewable energy practices.

Ref. No.....

Dated .....

This policy will be communicated to the students, teaching faculty and staff via internal communication channels . The Energy Policy, objectives and implementation will be reviewed on a regular basis by a three member committee chaired by the Principal & IQAC coordinator of the College. Other members of the committee shall be nominated under the guidance of the principal of the college. By adhering to this Energy Policy, State College of Teacher Education Kohima aims to create a sustainable campus environment and demonstrate our proactive approach to environmental responsibility and continuous improvement.
